Penetration Testing Services

procyber.hu

At ProCyber, we identify weaknesses before attackers do by delivering high-quality penetration tests and vulnerability assessments that give your business real security, not just compliance checkboxes. Fewer blind spots. More confidence. More time back to focus on running your business, not worrying about what is hiding in your network.

Why Work With Me

- Engagements start within 1-2 weeks.
- Reports for technical and management audiences.
- Fixed-scope or day-rate. No retainer required.

Industries Served

FinTech & Banking	SaaS & Cloud
Healthcare	E-commerce
MSPs & IT Firms	Government

CREST · 2024

MSP & Firm Partnerships
White-label contract pentesting for MSPs and cybersecurity firms. Overflow capacity, specialist engagements under your brand. Fast onboarding, NDA-ready.

Penetration Testing Services

Web Application Pentesting

Manual, OWASP-based web app testing covering SQL injection, XSS, auth bypass, business logic flaws, API security, and more. Every finding includes developer-ready remediation advice.

OWASP Top 10 | API Security | Auth Testing
Business Logic | BurpSuite

Infrastructure Penetration Testing

External and internal infrastructure assessments from public-facing servers and cloud environments to network misconfigs, privilege escalation paths, and Active Directory weaknesses.

External / Internal | Privilege Escalation | Active Directory
Cloud Security | Nessus

Network Security Penetration Testing

Full-scope network tests covering perimeter defenses, segmentation weaknesses, firewall rule analysis, and lateral movement opportunities. Mapping exactly what an attacker could reach.

Nmap | Firewall Analysis | Segmentation
Wireless Security | Lateral Movement

Secure Source Code Review

I review code the way an attacker reads it, identifying logic errors, missing controls, and dangerous patterns automated scanners miss. Guidance is code-level and immediately actionable.

Manual Review | SAST | PHP / JS / Python
Dev-Friendly Reports | JIRA Ready

Social Engineering

Realistic phishing simulations, pretexting campaigns, and vishing tests that reveal how your team responds under pressure. Results include staff training recommendations.

Phishing | Vishing | Pretexting | Awareness Training
Campaign Reports

Mobile Application Pentesting

iOS and Android security testing covering insecure data storage, improper session handling, API abuse, reverse engineering, and OWASP Mobile Top 10 vulnerabilities.

iOS & Android | OWASP Mobile | API Abuse
Reverse Engineering | Insecure Storage

Engagement Lifecycle

From first contact to final handover
